Our Oriental Seeds are produced in our own gardens in Japan and China under a great care and personal control, and they are imported directly from these countries into our hand. We guarantee the quality to be pure and strong in vitality with high germination.

GUARANTEE OF SATISFACTION—We positively guarantee all seeds and plants sold by us to be exactly as described in this catalog, and free from disease and insect pests. We also guarantee them true-to-name, and will replace, free of charge, any that may prove otherwise through a possible error.

While we guarantee all seeds and plants to reach you in good growing condition, we do not guarantee crop, and cannot be held responsible if later the plants fail. The life of a plant after it reaches the planter in good condition depends entirely upon conditions over which we have no control. A tree, shrub or other plant is a living organism, as much as a cow, horse or man. It breathes, drinks and feeds, and is subject to attacks of disease and insects. Even with our superior quality seeds and plants, success depends largely upon cultivation, soil and weather conditions, so it is therefore agreed that in no case shall the Oriental Seed Co. be liable for more than the original purchase price.

Acres of Chinese Cabbage on Our Paoting-fu Farm in Chili, China

The culture is the same as for spinach or lettuce. The seed should be sown any time after May and for main crop from July to September, $\frac{1}{2}$ inch deep in the row and rows about 24 inches apart. When the plant has grown up 5 to 6 inches thin out to 10 inches apart. Cultivate well and when large enough they should be blanched by earthing up and tying closely with burlap. Any good soil is sufficient, but they seem to head up best in rich black adobe soil. Once ounce of seed is enough for 500 feet of drill.

“Paoting” genuine Wong-Bok

(REGISTERED BRAND) (銹球白菜)

Big compact tender and crisp. An excellent “Wong-Bok.” We have found this to be absolutely the best firm-heading “Chinese Cabbage” to grow during the summer months. It will not scald or burn and will make a head when other varieties fail. It somewhat resembles “Kinshu” in shape and “Shantung” in character of leaf, color and size, but the head is more tightly compacted. It will produce a head of 15 pounds and will stand long before bolting to seed. It is excellent in quality; crisp, tender and brittle, with a fine celery flavor. We recommend it either for the market gardener, trucker or private planter, as it is a perfect “Chinese Cabbage” in every respect, not only being in the largest size, but of handsome color and of the finest quality. It is probably the safest variety for an amateur to plant, as it does well at all seasons and one is almost sure of getting a crop. It is vigorous and free from insects. (Pkt. 10c.) (Oz. 40c.) (4 Ozs. \$1.25) (lb. \$4.50) (2 lbs. \$8.00) postpaid. This seed grown in our Paotingfu Farm, in Chili, China.

WONG-BOK, NEW ALLHEAD (新皆球白菜)

WONG-BOK, NEW ALLHEAD (新皆球白菜)—The best and most popular grown, known for its quality and compact leaves which are tightly held together. (Pkt. 10c.) (Oz. 35c.) (4 Ozs. \$1.00) (lb. \$3.50) (2 lbs. \$5.60) postpaid.

WONG-BOK, CHE-FOO (芝罘白菜)—One of the most excellent varieties. Large outside leaves with a dark greenish color and the inside is compact, tightly grown, and has a beautiful white, crisp appearance with a mild

cabbage flavor, delicate and delicious. It is naturally very hardy and productive and will stand against insects. (Pkt. 10c.) (Oz. 30c.) (4 Ozs. 85c.) (lb. 3.00) (2 lbs. \$4.80) postpaid.

WONG-BOK, SHANTUNG (山東白菜)—A production of Shantung, a province in China Distinctive flavor, very mild and pleasant. PE-TSAI CHOKUREI—Easily grow to 7-8 pounds a head in ten weeks. A most excellent one among the varieties. Large outside leaves with a yellow striped color and the inside leaves grow round gradually, more like the Cos-lettuce. The heart is pure white, tender, sweet, and delicate in taste. The young leaves are very popular for use in salad. It is very hardy and will keep until early spring if placed in the cellar. The tender leaves make it a desirable plant for poultry greens; much more economic and desirable than alfalfa, swisschard or lettuce Etc., because it can be grown with less care and in any convenient place about the premises. Try it for your hens. One ounce will sow 100 feet of row. (Pkt. 10c.) (Oz. 20c.) (4 Ozs. 50c.) (lb. \$ 1.50) (2 lbs. 2.70) postpaid.

支 那 西 湖 白 菜

CELERY CABBAGE OR CHINESE PE-TSAI, CHIHILI This exceptionally fine vegetable is rapidly growing in public favor. Its growth resembles the Cos lettuce, but the outer leaves have the general texture of ordinary cabbage. When the outside leaves are stripped away the cabbage presents a well high irresistible appearance. Our strain of this seed is grown in China. Note the compact, tightly folded leaves in our illustration and their beautiful white crispness. The heads blanch without tying. July is the proper planting time. (Pkt. 10c.) (Oz. 45c.) Col repollo **CABBAGE** (キャベチ) 甘 藍 カンラン

It is difficult to give definite cultural directions for cabbage, since it is possible to have good cabbage at all seasons of the year in some part of the country. Seed may be planted almost any time of the year. However, there are the seasons preferable for sowing—in September for early spring cabbages, from January to April for summer and fall cabbages, and July to August for winter cabbages. Sow the seed $\frac{1}{2}$ inch deep and transplant the early varieties to rows 24 inches apart and 18 inches apart in the rows. They will mature in about 105 days. The late varieties mature in about 150 days and should be planted in rows 30 inches apart and 24 inches apart in the row. To prevent the heads from splitting open before they are ready to be harvested, the plants should be loosened a little at the root. Cabbages require plenty of moisture, but too much water causes them to rot very readily.

Early Varieties (早 生) わ せ

COPENHAGEN MARKET (コーペンハーゲン、マーケット)—A new and early variety producing fine heads weighing 10 to 12 pounds, which are very solid and of excellent quality. It is the largest of the early round varieties. (Pkt., 10c.) (Oz., 50c.) ($\frac{1}{4}$ lb., \$1.65) (lb., \$5.00). Postpaid.

CHARLESTON, or LARGE EARLY WAKEFIELD (チャーレストン)—Of the same type as Jersey Wakefield. It grows about one-third large and is ready to cut a few days later. (Pkt., 10c.) (Oz., 40) ($\frac{1}{4}$ lb., \$1.35) (lb., \$4.00). Postpaid.

EARLY JERSEY WAKEFIELD (アーリー、ジャシー、ウエーキフィールド)—One of the best and most popular early varieties. Forms round, pointed heads of good size. Is very hardy and on account of its thick outside leaves is able to resist cold and other unfavorable conditions to a great extent. (Pkt., 10c.) (Oz., 35) ($\frac{1}{4}$ lb., \$1.00) (lb., \$3.50). Postpaid.

GOLDEN ACRE (ゴールドデン、エーカー)—The earliest and of high quality. Plants are compact and form solid round heads weighing 3 to 5 lbs. Heads should be ready for use 60 to 75 days after transplanting. (Pkt. 10 cts.) (Oz., 60 cts.) ($\frac{1}{4}$ lb. \$1.80) (lb. \$6.00). Postpaid.

Second Early Varieties (中 生) な て か

ALLHEAD EARLY (オールヘッド、アーリー)—The earliest of the large flat-headed varieties. Heads remarkably solid and uniform in size, of very compact growth. (Pkt., 10c.) (Oz., 40c.) ($\frac{1}{4}$ lb., \$1.35) (lb., \$4.00). Postpaid.

EARLY DWARF FLAT DUTCH (アーリー、ドウオフ、フラット、ダッチ)—Matures early and makes large, solid, flat head, with short steams. (Pkt. 10c.) (Oz., 40c.) ($\frac{1}{4}$ lb., \$1.35) (lb., \$4.00). Postpaid.

GLORY OF ENKHUIZEN (グローリー、オブ、エンクイゼン)—Earlier than the All Seasons; of medium size, globe shaped and handsome dark green color, just right for the market. Leaves fine ribbed; outer leaves set close to permit close planting. Where this variety has been tried in market growing districts the growers have been very enthusiastic. (Pkt. 10c.) (Oz., 40) ($\frac{1}{4}$ lb. \$1.25) (lb., \$5.00). Postpaid.

SUCCESSION (サクセツション)—It is a second-early variety coming in immediately after the first-early sorts. It greatly exceeds in size any variety in its season. Without doubt it is the best second-early Cabbage in existence, and is so finely bred, so free from coarse veining of the leaves, that, in addition to its reliability and sure cropping quality, it possesses all the fine qualities of the very best earlier varieties. (Pkt., 10c.) (Oz., 80c.) ($\frac{1}{4}$ lb., \$2.50) (lb., \$8.00) transportation paid.

Brussels Sprouts
(子持キャベチ)

BRUSSELS SPROUTS (子持キャベチ) *Berza de Bruselas*

Brussels Sprouts are more hardy than cabbage, and in mild climates may remain in the open ground all winter, the heads being removed as desired. For winter use in cold localities, take up plants that are well laden with heads and set them close together in a pit, cold frame or cellar, with a little soil around the roots.

One ounce will produce 1,000 plants and will mature in about 150 days. Sow as directed for cabbage, and set the plants in rows 2½ feet apart and 2 feet apart in the rows. They require a long season of growth, but with suitable soil and liberal manuring an excellent crop of this vegetable can be secured. Cultivate the same way as cabbage.

DWAFF PERFECTION (ドウオーフ・パーフェクション)—Grows 2 to 3 feet high and is well covered with small sprouts which are very solid and excellent in flavor. (Pkt., 10c.) (oz., 30c.) (1/4 lb., \$1.00) (lb., \$ 3.00) postpaid.

DANISH GIANT (ダニツシュ・チャイアント)—The plants are of strong, robust habit and very productive; sprouts of large size, solid and of delicious flavor. (Pkt., 10c.) (oz., 35c.) (1/4 lb., \$ 1.15) (lb., \$ 3.50) postpaid.

花椰菜 CAULIFLOWER (カリフラワ) *Coliflor*

Cauliflower is grown the same as cabbage, but requires more fertile soil, and like cabbage and lettuce is not a good summer crop. There are two good seasons for sowing cauliflower seed: for fall and winter sow the seed in June and July, for spring sow in September and Oc-

tober. Transplant the plants when they are about sixweeks old, and always keep them in a thriving condition. If large or old plants are used and if they are not kept growing constantly some will head prematurely and others will go to seed.

EARLY SNOWBALL (アーレスノーボール)

The best and most popular early variety grown. There is a vast difference in the strains of this variety offered, but what we offer is the best imported stock. Those who have had trouble with cauliflower should try teis Snowball. It will make uniformly fine heads, even under adverse conditions. (Pkt., 25c.) (1/4 oz., 75c.) (oz., \$2.25) (1/4 lb., \$8.90) postpaid.

EXIRA EARLY PARIS (アーレー・パリ)—
A hardy variety; very easy to grow; good
for either early or late. (Pkt., 10c.) (4 oz.,

**CALIFORNIA WONDER (カリホルニヤ・ウ

large, solid heads during the Winter. This
variety has given great satisfaction in Cali-
fornia wherever tried. (Pkt., 14c.) (1/4 oz.,
50c.) (oz., \$1.50) (1/4 lb., \$5.00) postpaid.

**VEITCH'S AUTUMN GIANT (オータム・
チャイアント)**—The most popular of all the
late varieties. The heads are pure white,
large, firm and compact; being well pro-
tected by the foliage, they remain fit for
use for a long time. (Pkt. 10c) (1/4 oz., 25c.)
(oz., 65c.; (1/4 lb., \$2.00) postpaid.

DRYWEATHER (ドライウエザー)—This find variety is especially adapted for localities subjected to long, dry seasons. It is a very sure header, second early and produces large, pure white heads of delicious flavor, (Pkt., 25c.) (1/4 oz., 90c.) (oz., \$2.75) (1/4 lb. \$8.00) postpaid.

Zanahoria **CARROTS** (キャロット) 人參 (にんじん)

This delicious and nutritious vegetable is not appreciated as it should be. Properly cooked, it is a great delicacy. Its feeding qualities for stock are excellent. Cover the seed only half an inch and give careful cultivation throughout the season. They may be eaten either when a half inch or so in diameter or when fully grown.

TOKYO DARK-GREEN

Black Spine. The vines attain twice the length of common varieties. Young plants are bushy, but as soon as they are well established begin to throw out runners and climb, so may be grown on fences, poles or trellises, thus saving much valuable space in small gardens. Fruits 9 inches in length by 2½ inches across when mature, of fine green color; flesh is thick and firm, never bitter, a superb variety for slicing. When young, makes fine pickles. Very prolific; fruits are raised well above the ground so seldom suffer from wet weather or insects. Vines are almost mildewproof and continue in bearing until late in the season. This excellent climbing variety is noted for standing hot dry summers without serious harm and so is well adapted to Southern climate. It also does well north. If kept picked, the vines will bear freely all season and retains deep green color of the skin for a long time after picked. (Pkt. 10c.) (Oz. 35c.) (4 Ozs. \$1.00) (lb. \$3.50) postpaid. Imported Seed.

CUCUMBER "CHINA-LONG"

A most remarkable and handsome new long green out door cucumber from China. The most fleshy and finest flavor of the long green type. The vines make a tremendous growth. They are unusually vigorous, bearing an enormous crop. The foliage is rich dark green and is quite resistant to diseases and insect attack.

CUCUMBER, CHINA-LONG makes perfectly straight fruit. They average about 20 inches. They are thickest in the middle of fruit, where they average 2 to 3 inches in diameter. The attractive fruit taper gently toward the ends, holding their thickness well until they run off into a round stem and blossom end.

The skin of the fruit is a beautiful rich dark green set with a number of the characteristic long green. We have many enthusiastic letters from customers who have proclaimed it the most beautiful and best of all long green cucumbers. A most remarkable feature of **ORIENTAL'S CHINA-LONG** is the fact that it retains the beautiful deep green color of the skin until it is fully ripe.

CUCUMBER, CHINA-LONG is practically all flesh, containing but very few seeds. The thick flesh is a beautiful white. It is crisp, juicy, and of the most delicious flavor, and essentially a qualified cucumber which is absolutely unequalled for market or home use.

The fine large long fruits are extra fine for slicing, but if picked when of small size, they make

SWEET CORN (コーン)

One of the garden's sweetest vegetables. Plant from February 15th to August 1st, in rows 3 feet apart, drop 6 or 7 kernels in hills every 18 inches in the row and thin out to two of the healthiest plants in each hill when about 5 inches high. Break off all side shoots except the two top ones as they will produce the largest and best ears. Lechuga **LETTUCE** (レタス) 玉ちしや

(If interested in larger quantities, please write us for special prices)

Lettuce seed should be covered very shallow to secure germination, especially the black seeded, if sown under glass or in the house. For early spring use, sow in September and protect through the winter in cold frames, the same as cabbages, or sow in hot beds in March and transplant to open ground as soon as it can be worked. For late supplies sow in open ground as soon as the season will permit, in rows one foot apart; thin out plants one foot apart in rows. If sown every two or three weeks to the middle of August, it may be had in perfection the entire season. One ounce will sow 125 feet of drill and produce 3000 plants.

Chayote ヤチヨテ瓜 CULTURAL DIRECTIONS - One fruit envelopes one seed, which sprouts from the large end. Plant where you intend it shall grow. Cover only the large end, leaving the small end exposed. (See Picture.) Or let the fruit lie around until it has well sprouted, and then plant the seed, leaving the sprout well above ground. Water freely and do not be alarmed if frost should destroy it. A new shoot will soon appear. Give it abundance of water throughout the hot summer season.

The vine is a rampant grower. The first year from seed it will grow twenty to thirty feet. Destroyed to the ground by frost, it soon sends out new growth, and during the second season will extend vines forty or fifty feet in every direction. During September it starts blooming, having a small, white, insignificant flower. Within four weeks the fruit is large enough for the table. One vine in two years if properly trellised will produce more than one thousand fruit. 50c, each postpaid. Orders shipped January, February and March only.

MUSHROOM SPAWN (茸の種子)

CULTURAL DIRECTIONS

Ten pounds will spawn about 10 feet square. Mushrooms can be grown in any dark room or cellar where the temperature can be kept at from 50 to 70 degree. From some old pasture procure good, rich soil, and to every bushel of this soil add 2 bushels of fresh horse manure. Of this well-mixed compound prepare a bed, say, 4 feet wide. Put down a thin layer and pound it down hard, and go on until you have a bed 12 or 18 inches thick. As soon as the temperature of the bed falls from 75 to 50 degrees, the spawn may be inserted in pieces about the size of a walnut, about 2 inches deep and 6 inches apart. Cover with loamy soil about 2 inches deep and beat it down evenly and firmly. Finish off with a covering of clean hay, about a foot thick, and the work is done. If the temperature is right, in 6 or 8 weeks you may expect mushrooms. The beds will continue bearing from 20 to 30 days. After the first crop is gathered spread over the bed an inch of flesh soil, moisten with warm water, and cover with hay as before. The main conditions in mushroom growing are proper and uniform temperature and very rich soil.

Tall or Climbing and Dwarf

The foliage of nasturtiums is pretty and the flowers very beautiful and contained in a great number of bright colors and tints. Sow the seed where it is to remain late in the Spring after danger of frost is over.

It is seldom necessary to thin the young plants, as they will bear standing close together.

Nasturtiums prefer dry, rather rocky soil, such as we usually call "poor" soil, and bear their flowers in such locations in greater profusion than in a rich garden, where they run too much to leaves. This adds to their value for planting over many unsightly places.

THE ROSE ローズ

December, January, February and March are the best months for planting but should the season be favorable you can still plant during the early part of April. The plants sent out during these months are what we call dormant two-year-old budded plants. Roses give best results when planted in a fairly sunny location and in good heavy sediment soil to which may be added some old manure or bone meal, but never use fresh manure. When planting straighten out all roots and as the dirt is filled in see that it is well packed around them; this keeps out the air and encourages a new growth of rootlets. Be sure that the Rose is planted so that the point where it is budded shall be just below the surface.

LORD CHARLEMONT (S. McGredy & Son, 1922.)—The long pointed, high-centered buds are the most nearly perfect of any red rose grown. They are produced singly on good strong stems. The color is a brilliant glowing crimson with almost black shadings. The open blooms are fully double, large and delicately fragrant. (Price \$1.50)

MARGARET MCGREDY (H. T. McGredy & Son, 1927) Large, semi-double blooms of orange-scarlet and oriental red changing in the mature flowers to carmine-rose make this new variety the sensation of the rose world. The wonderfully beautiful blooms are borne on strong stems that carry the flowers upright. The plant is an unusually strong grower and produces an abundance of bloom. (Price \$1.50)

TALISMAN—H. T. (Montgomery Rose Company, 1929.) The coloring is most unusual being a combination of gold, apricot, pink and old rose in mingled splashes, streaks and blends. Buds are of splendid form and so fragrant as Mme. Butterfly. Has attained such a remarkable popularity that the demand has so far exceeded the supply of this sensational rose. (Price \$2.00)

The bulbs should be planted about 4 inches deep and 7 or 8 inches apart. Any good garden soil will make strong plants and good bloom, but a light application of any well decayed manure or good commercial fertilizer applied on the top of the ground after the plants are several inches high will aid in producing larger blooms. Keep the ground moist until the flower spikes begin to appear, then water freely. The bulbs should be taken up in the fall, after the leaves have become yellow, and then stored in a cool, dry place, free from frost. From December to April are the months to plant Gladiolus.

Tree and Shrub Seeds 庭木の種子

Most tree seeds are better sown in the latter part of winter or spring, though there are many that can be sown at any time, and some which must be sown while the seeds are quite fresh. Most kinds are best sown in boxes, of light, well-drained soil, covering the seed about its own depth or some of the larger ones a little deeper, press the soil down slightly with the hands. Keep in a lath house, frame, or some sheltered place and water carefully. As soon as large enough to handle, pot and grow on until large enough to plant in the open ground, where they are to remain. Pines and other Conifer seeds are best sown in March and April, use a soil containing plenty of decomposed granite and always water in the morning and not at night, as the young seedlings "damp off" very easily. Acacia seeds should be soaked in hot water for twelve hours or more before sowing.

Japanese Giant Chrysanthemums 日本秋菊

The Chrysanthemum is the queen of autumn flowers. Nothing is more beautiful as house plants, in the late fall and early winter, than these large, fluffy, Japanese varieties. For massive blooms, grandeur of colors, ease of culture and certainly to flower there is no plant that will surpass them. The endeavor of nearly all growers has been, in late years, to introduce varieties which will produce the largest and finest blossoms for exhibition purposes. It is from these varieties that this seed is saved. These plants are easily raised from seed. Almost all the new and striking varieties are the result of plants grown from seed, and the amateur is as liable to originate new and splendid varieties as is the professional florist.

They are of the easiest culture and always give satisfaction as house plants. The blossoms you get will surprise you with the odd and beautiful forms of the flowers and abundance of bloom. If you want a magnificent collection of these gorgeous Chrysanthemums—red, white, yellow and pink—you will make no mistake in getting a packet of our select seed.

We sell the seed in packets only, and guarantee it to be from the genuine large flowered Japanese varieties, imported seed. Pkt., 25c; 3 pkts., 60c., postpaid.

Choice Chrysanthemum Plants

Set out the plants about 2 feet apart in well fertilized ground. After the young plants have grown 2 inches pinch them back about 4 inches, then each plant will send out from 3 to 4 stems. In order to give strength to the blossoms, cover the ground with a layer of an inch or two of decayed manure. As soon as the buds appear on the stems, let the largest remain and pinch off all others.

Ready about May 1st. (Each 20c.) (6 for \$1.00) postpaid.

MAJOR BONNAFFON—Deep yellow, incurved.

MEUDON—Immense pink, broad, long, drooping petals, full in the center.

MRS. G. G. MASON—Clear-blood-red.

PINK TURNER—Clear lavender-pink, incurved.

WILLIAM TURNER—Pure white, incurved.

YELLOW TURNER—Light yellow, incurved.

Pompon or Button Chrysanthemums

Ready about May 1st, Each, 15c; doz., \$1.50; postpaid.

YELLOW CAPRICE—Brilliant yellow, Button.

IMPORTED JAPANESE LILY BULBS

Hardy Lilies 日本百合

LILIES are stately and most beautiful bulbous plants producing large flowers of exquisite outline and varied coloring. They are hardy even in cold locations with protection, and usually surviving for many years. Ideal locations are in the shrubbery or herbaceous border where the roots are sheltered from the hot sun. Groups of 6 or more lilies of a kind, here and there, in such situations are most effective. Large isolated clumps or beds of the varieties Auratum, Henryi, Speciosum, Tigrinum, etc., are also very beautiful. They should be planted just as soon as the ground can be worked 6 to 8 inches below the surface in light soils, or 4 to 5 inches below in heavy soils; in the latter case the bulbs should be surrounded by sand to facilitate drainage.

LILIUM LONGIFLORUM "GIGANTEUM"—This type produces the most beautiful white flowers of large size, perfect form and of superior substance; the stems marked kind of black. The flowers will be opened little later than "Formosum" but it is the high sort for EASTER forcing. First size bulbs, 50c. each; \$ 5.00 per doz. postpaid.

AURATUM (The Golden Rayed Lily of Japan.) The flowers are pure white, thickly studded with crimson spots, while through the center of each petal runs a clear golded band. Fully expanded, the flowers measure nearly a foot across and possess a most delicious fragrance. Season of bloom from July to October. 3 to 5 feet. (See illustration.) Extra size bulbs, 50c. each; \$ 5.00 doz.

HENRYI. (The Yellow Speciosum.) A new rare and very beautiful Lily from China. It is very hardy, and without doubt one of the best Lilies for garden culture. The flower stalks, 3 to 5 feet high, carry 5 to 8 large flowers each, rich apricot-yellow, lightly spotted with brown. The shape and size of the flowers has suggested the name "Yellow Speciosum" 75c. each; \$7.50 doz.

REGALE ("A Royal Beauty"). The flowers are white, slightly suffused with pink, with a beautiful shade of canary yellow at the center; blending out part way up the trumpet. The fragrance is fascinating. A splendid hardy Lily for the garden, flowering about July 1st. Well-grown bulbs often produce five to eight blooms. 50c. each; \$ 5.00 per doz.

SPECIOSUM RUBRUM (Roseum). White, shaded and spotted with rose and red. Largest bulbs. 40c. each; \$4.00 doz.

TIGRINUM SPLENDENS. (Improved Tiger Lily.) The grandest of the Tiger; black polished stem, sometimes 6 feet high. Very large pyramids of flowers, orange red, spotted with black, 3 to 5 feet high. Blooms in August. 35c. each; \$ 3.50 doz.
